DETAILED ACTION
REASONS FOR ALLOWANCE

Claims 13-14, 16-17,19-20,22-25 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a camera-recorder apparatus to record video images for later retrieval.

The following is a statement of reasons for the indication of allowable subject matter: The independent claim 13 identifies the uniquely distinct feature for "a metadata extraction unit operable to derive image property data from said image feature vector data substantially in real time at said capture of said video images, said image property data being associated with said respective images, and including sub shot segmentation data derived from said color distribution data; and a data path by which said camera-recorder apparatus is operable to transfer said derived image property data to an external data processing apparatus"

The independent claim 16 identifies the uniquely distinct feature for "a metadata extraction unit operable to derive image property data from said image feature vector data substantially in real time at said capture of said video images, said image property data being associated with said respective images, said image property data including activity measure data derived from a variance of said color distribution data and indicative of a change of said image content or said audio content between said

video images; and a data path by which said camera-recorder apparatus is operable to transfer said derived image property data to an external data processing apparatus”

The independent claim 19 is identifies the uniquely distinct feature for “a metadata extraction unit operable to derive image property data from said image feature vector data substantially in real time at said capture of said video images, said image property data being associated with said respective images, said image property data includes a representative key frame derived from said color distribution data and indicative of a predominant overall content of said video images; and a data path by which said camera-recorder apparatus is operable to transfer said derived image property data to an external data processing apparatus”

The independent claim 22 is identifies the uniquely distinct feature for “a metadata extraction unit operable to derive image property data from said image feature vector data substantially in real time at said capture of said video images, said image property data being associated with said respective images or groups of images; and a data path by which said camera-recorder apparatus is operable to transfer said derived image property data to an external data processing apparatus”

Fuller et al., US 6,833,856, discloses a digital capture system, such as a digital still camera or digital video recorder, has an embedded real-time content-based analysis function in the capture device to extract metadata from the digital signals. In one embodiment, metadata (descriptive information about the digital content) is formatted and stored separately from the content. In another embodiment, the

metadata may be formatted and combined with the digital content in a container format such as MPEG-7, QuickTime, or FlashPix.

Jain et al., US 5,893,095, discloses a system and method for content-based search and retrieval of visual objects. A base visual information retrieval (VIR) engine utilizes a set of universal primitives to operate on the visual objects. An extensible VIR engine allows custom, modular primitives to be defined and registered. A custom primitive addresses domain specific problems and can utilize any image understanding technique. Object attributes can be extracted over the entire image or over only a portion of the object. A schema is defined as a specific collection of primitives.

None of the prior art, either singularly or in combination, fails to anticipate or render the above underlined limitations obvious. Claims 14, 17, 20, 23-25 are dependent on claims 13, 16, 19, and 22 and therefore dependent claims also allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
